

**ANS d'innovation, de service et de fiabilité**  
**DRAINVAC**  
**YEARS of innovation, service & reliability**

*Mr. Conrad Sévigny, founding president of Drainvac International, Inc.*

*Mr. Martin Tremblay, U.S. Sales Manager*

## Drainvac celebrates 25<sup>th</sup> anniversary

Drainvac recently celebrated its 25th anniversary with a gathering of dealers and the launch of its newest product lines. More than 200 dealers and guests assembled at the Hotel des Seigneurs at St.-Hyacinthe, Quebec for a lovely dinner and reception. The highlight of the evening was the introduction of Drainvac's three newest series of central vacuums.

### **Drainvac Summum**

This top-of-the-line series features the Fibrablock permanent filtration system with a recuperating Bioblock filter, as well as the revolutionary Silverblock process. Models are available with 500, 600, 605, 700, and 1236 air watts of power.

### **Drainvac Generation 2**

The Generation 2 models combine optimal design and efficiency. They also feature the Fibrablock permanent filter and Bioblock recuperating filter and units are available with 500, 600, 700, and 1236 air watts of power.

### **Drainvac Pro**

This is Drainvac's revolutionary professional series aimed at contractors and professional builders. It provides competitively priced units for almost any application.

Drainvac revealed an innovative concept in the creation of three new series of central vacuum systems that will generate a lot of anticipation around this new technology

Drainvac's mission is to give an exceptional service to their customers, distributors and retailers and to be able to deliver a superior product that will innovate the technological world of central vacuuming.

Drainvac will experience an unprecedented success thanks to its central vacuum technology including a new electronic circuit board and a unique filtration system. This way, Drainvac will distinguish itself from the competition.

*In honor of the 25th anniversary, Marie-Claude and Martin Sévigny surprised their father with an Ultra Classic customized Harley Davidson.*

*Guests from all over Canada and USA.*

*Dining, more than 200 guests were present at this event.*

*Introduction of the new Drainvac series.*

This new range of products constitutes a very important milestone in the evolution of the company, its expansion and success.

With increasing manufacturing activities, the business counts many retailers in North America and an impressive network of distributors in more than 20 countries worldwide.

Thanks to its innovation efforts and a young, dynamic, dedicated team, Drainvac is experiencing the success that makes them a leader in Canadian central vacuum technologies.

## **The technology & new products**

In 1998, Drainvac went from roto moulding to injection mode. This allowed to considerably accelerate the assembly of products while increasing the level of quality giving the product a new look. With this new process, Drainvac decided to add color while innovating with a new line of injection moulded central vacuum cleaners that will use a new material called the PC / ABS resulting in a brand new exterior design. The shells (hat & tank) are now offered in four painted colors (burgundy red, blue, silver and charcoal). The paint is Polyurethane based oven dried at 160° resulting a superior quality that resist choc and scratching. This process meets the ROHS standards.

Always within the same perspective, Drainvac will continue innovating both in the filtration and electronic control fields. Drainvac has introduced new printed circuits not only of better quality but with reduced energy consumption. A more sophisticated circuit with options that will regulate and counter power fluctuations when starting the unit. This will prolong the life of the motor and all of the electrical and electronic components as well.

Drainvac offers a new range of filtration systems that has an advantage of being of better quality, which provides better motor protection. This filtration system includes a disposable recuperation filter that is biodegradable. With the close collaboration of it's suppliers, Drainvac can offer filters that kill bacteria on contact and prevents electrostatic formation and dustmite reproduction, even eliminating them.

## **The manufacturing**

Drainvac is comprised of a dynamic and dedicated manufacturing team which manufactures products in accordance to the engineering department which in turn, takes care and manages the customer's projects according to their specifications and requirements. ❖
